

ASSIGNMENT 3

Objectives: Exploratory Data Analysis

- Find the most common words and create word clouds
 - Find the top 30 words and create word clouds (by looking at these top words, you can see that some of them have very little meaning and could be added to a stop words list)
 - Update by excluding new stop words and recreate the word cloud
- Size of vocabulary - look number of unique words and also how quickly someone speaks
 - Find the number of unique words that each comedian uses
 - Calculate the words per minute of each comedian see who talks the slowest and fastest (Comedy special run times from IMDB, in minutes i.e. Consider run_times = [60, 59, 80, 60, 67, 73, 77, 63, 62, 58, 76, 79])
plot our findings
- Most common terms to find a specific amount of context
 - create a scatter plot of different categories in scripts.
 - What other word counts do you think would be interesting to compare instead of the bad words in case of comedian script analysis? Create a scatter plot comparing them.
